with pace and precision.

NEXGEN AIR KNIFE DRYING SYSTEMS

Speed, Precision, Perfection: Air Knife Drying Systems at Their Best

www.nexgenmachines.com

In today's fast-paced industrial environment, the efficiency and quality of production processes are paramount. NexGen Air Knife Drying Systems recognizes the crucial role of advanced drying technologies in enhancing these aspects.

Inefficient Drying Issues

Studies indicate that inefficient drying methods can lead to production delays, quality issues, and increased energy consumption.

Benefits of Advanced Drying

Research conducted by industry experts highlights the significant impact of advanced drying technologies on production efficiency.

Efficiency Boost

Implementing air knife drying systems can result in up to a 30% reduction in drying time, leading to improved throughput and reduced operational costs.

Precision and Quality

Moreover, the precision and uniformity offered by these systems contribute to higher product quality and consistency.

At NexGen, we are committed to addressing these challenges by offering state-of-the-art air knife drying solutions. Our systems are designed to optimize drying processes, increase productivity, and elevate product quality. By harnessing the power of innovation and precision, we empower businesses to achieve new levels of efficiency and excellence in their operations.

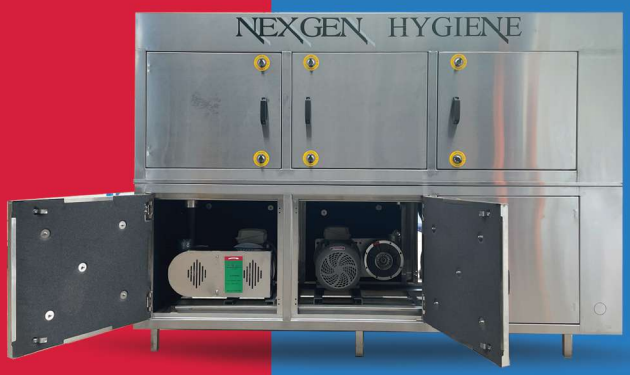
SS Enclosure

System Performance:

- 10 HP Blower generates high volume of air upto 675CFM.
- High Velocity airstream of upto 200m/s.
- System Pressure of around 250mbar.
- Capable of continuous 24/7 operation.
- Eliminates the use of compressed air.

Benefits:

- **Power saving:**
  Low energy consumption as compared to the conventional compressed air systems.
- **Improved drying time & product quality:**
  High velocity air with constant pressure helps quick removal of surface moisture.
- **Cost saving:**
  Low capital cost with faster payback period.
- **Clean oil-free and Dry air:**
  Filtered blower inlets prevent particle contamination.
- **Use Of Natural Heat of Compression:**
  There is a rise in temperature of 8° to 10°C due to addition of natural heat of compression which helps improve the drying process.
- **Compact Design and Simple to Install:**
  System can be easily adapted to the existing conveyor line.



Pouch Dryer

- Drying of all types of pouches (Pillow /gusset/plain etc)
- All pouch sizes can be dried
- Customized according to customer needs
- Speeds vary from 40 pouches per min(ppm) to 150 ppm
- Guides are given so pouches are oriented properly
- Air Knife Drying systems used for drying pouches
- Conveyor made of plastic molded links
- High efficiency of the Drying Process.
- The temperature of the outlet air is 8 to 10 deg higher than the ambient which further helps in the drying process.
- This is a Constant Pressure System because of which there will be consistency in the drying process.
- Material of construction SS 304

Crate Washer

- Washing and drying of all types of crates and crate sizes
- Can be customised as per customer requirements
- Line speeds from 300 crated per hour to 600 crates per hour
- Spray Nozzles are oriented to rinse the Crates in the most effective way from to and Bottom.
- After washing, the Crates will be passed under the High Velocity Air Knife curtain. This will eliminate maximum surface water on the Crates
- Hot water provisions can be provided
- Machine can be divided in section as per requirements. Eg: Pre Rinse / Main Wash / Hot wash / Drying section

Applications

Beverage Industry

Glass Bottle drying Pet Bottle drying
Cans, jar & Tetra pack drying Crate cleaning & drying
Drying product packaging prior to inkjet coding or labeling

Pharmaceutical & Medical

Drying of vials, syringes, sterile packs, pouches, tubes, trays, crates & Pallets Drying of product packaging prior to ink jet coding or labeling Cap or Lid Drying Debris remove surface moisture removal dust remove excess product removal Prevent product slippage Leveling coating of caplets Conveyor belt blow-off

Food, Confectionary, Fruit & Vegetable Indusrty:

Meat / Fish / Poultry
Food Moulds
Dairy products
Belts Cleaning
Tray, crates & pan drying Pouches, Packages & Bags
Fruits & Vegetables
Chips Excess Water Removal
Prevent product slippage
Dust removal

Automobile / Engineering

Engine Components
Filter Dust cleaning
Chasis Items
Transmission Housing
Tyre& Wheels Batteries
Rubber Sheet metal

Partnership Excellence

At NexGen Hygiene Systems Pvt. Ltd., we approach every partnership with a commitment to excellence. By understanding our clients' unique needs, we deliver tailored solutions that exceed expectations. Our dedication to open communication and flexibility ensures efficient and effective collaborations.

Moreover, our commitment to excellence extends beyond the initial engagement.We provide ongoing support and maintenance to ensure lasting value for our partners. With expertise and customer-centricity at our core, we empower partners to succeed in their industries. At NexGen, excellence is the cornerstone of every partnership.

Our Portfolio

KHS | Pernod Ricard | VB | pepsi | HCCB | HILDEN | CEAT | UB GROUP | ABD Allied Blenders & Distillers | Kajaria | Budweiser | ABInBev | SLMG Beverages | Parle Agro | BIKANERVALA

Heading into the Future

NexGen Air Knife Drying Systems envisions a future where sustainability, innovation, and expansion drive our growth. Our drying systems are committed to reducing energy consumption and environmental impact. We strive for continuous innovation to stay ahead in drying technology. Additionally, we aim to expand globally, reaching new markets and industries. At NexGen, we're dedicated to shaping a future where sustainability and innovation lead to growth and positive change.
